Discovery Fellows Program Welcomes Newest Cohort

Fri, 2018/11/02 - 6:15am

At the annual Discovery Fellows Fall Workshop and Reception on October 15, the Graduate Division and University Development and Alumni Relations welcomed the 27 newest Discovery Fellows as the program enters its sixth year.

The afternoon featured a welcome and orientation session for the newest Discovery Fellows, followed by an informal lunch and a communications workshop for all current Fellows. A reception for Fellows, faculty, University leadership, and the program’s founding donor rounded out the event. Discovery Fellows are PhD candidates in the basic sciences who have been selected to serve as ambassadors for UCSF’s basic science education programs.

This year’s lively workshop was led by Bri McWhorter, founder and CEO of Activate to Captivate. Drawing on her training as an actor, McWhorter had students explore the...
techniques that accomplished public speakers use to craft dynamic and compelling presentations, and to overcome self-consciousness. McWhorter has helped many UC students and faculty members, as well as leaders in business and academia, sharpen their skills in public speaking, networking, and interviewing.

Later, Discovery Fellows program founding donor Sir Michael Moritz offered remarks at the workshop’s conclusion before joining students for refreshments and conversation at the reception. See a video of Moritz and his wife Harriet Heyman [1] sharing the story of what inspired them to establish the Discovery Fellows Program.

The Discovery Fellows [2] program was established in 2013 with a generous gift of $30 million from Sir Michael Moritz and Harriet Heyman to the UCSF Graduate Division to ensure the future of PhD education programs in the basic sciences. Through additional gifts from Moritz and Heyman as well as over 1,200 other donors, the fund ? now at over $80 million ? has become the largest endowed program for PhD students in the history of the 10-campus University of California. This endowment provides support for all basic science PhD students at UCSF. The subset of advanced students chosen as Discovery Fellows serve as ambassadors for UCSF?s basic sciences programs, with the hope that they will become outspoken advocates for the importance of the innovative research going on at UCSF.

Since the program?s inception, there have been a total of 180 Discovery Fellows from 10 basic science PhD programs, including 75 current fellows. Program alumni [3] ? now numbering over 76 ? have gone on to a variety of positions in academia and industry research.

**Congratulations to these 27 students who were named Discovery Fellows in fall 2018:**

*Ryan Boileau*, Developmental and Stem Cell Biology
*Marcus Chin*, Pharmaceutical Sciences and Pharmacogenomics
*Daniel Clark*, Oral and Craniofacial Sciences
*Shizhong Dai*, Chemistry and Chemical Biology
*Susanna Elledge*, Chemistry and Chemical Biology
*Parinaz Fozouni*, Biomedical Sciences
*Muryam Gourdet*, Tetrad
*Hannah Graham*, Neuroscience
*Joe Hiatt*, Biomedical Sciences
*Austin Hsu*, Biomedical Sciences
*Lay Kodama*, Neuroscience
*Alexis Krup*, Biomedical Sciences
*Greyson Lewis*, Biophysics
*Anna Lipkin*, Neuroscience
*Christopher Mathy*, Bioengineering
*Priya Mohindra*, Bioengineering
*Lila Neahring*, Developmental and Stem Cell Biology
*Carlos Nowotny*, Tetrad
*Ramiro Patino*, Biomedical Sciences
*Jonathan Schor*, Neuroscience
*Charles Schurman*, Bioengineering
*Taylor Skokan*, Tetrad
*Sara Sunshine*, Biomedical Sciences
*Serena Tamura*, Pharmaceutical Sciences and Pharmacogenomics
*Kristine Trotta*, Tetrad
*Kaitlyn Tsai*
